Analiza

- ☐ Poziom węgla w biomase nadziemnej
 - ☐ Spadek w dziesięcioleciu
 - ☐ Wzrost w dziesięcioleciu
- ☐ Poziom węgla w pniakach
 - ☐ Spadek w dziesięcioleciu
 - ☐ Wzrost w dziesięcioleciu
- ☐ Poziom węgla w ściółce
 - ☐ Spadek w dziesięcioleciu
 - ☐ Wzrost w dziesięcioleciu
- ☐ Poziom węgla w martwym drewnie
 - ☐ Spadek w dziesięcioleciu
 - ☐ Wzrost w dziesięcioleciu
- ☒ Ilość pochłanianego węgla
 - 12127 - 15441
 - 15442 - 19883
 - 19884 - 23900
 - 23901 - 27453
 - 27454 - 29595
 - 29596 - 33213
 - 33214 - 39580
 - 39581 - 66708
- ☐ Poziom węgla w gałęziach
- ☐ Ilość pochłanianego węgla [t/ha] - 10 rok symul.
- ☐ Poziom węgla w biomase podziemnej

O czym jest ten projekt ?

OPEN ACCESS

ROZWIJANE OD PONAD 25 LAT

ELASTYCZNE I SKALOWALNE

ZGODNE Z WYTYCZNYMI IPCC

UZNANE PRZEZ JRC

Narzędzie

**POLSKI
INTERFEJS**

Świerk pospolity

80 lat

10 ha

I klasa bonitacji

Ekosystem

Scenariusz 0 – brak zaburzeń

Ekosystem

Scenariusz 1 – gradacja owadzia

Ekosystem

Scenariusz 2 – pożar

Ekosystem

Scenariusz 3 – zrab zupełny

Biomasa nadziemna Scenariusz 0 – brak zaburzeń

Biomasa nadziemna

Scenariusz 1 – gradacja owadzia

Biomasa nadziemna

Scenariusz 2 – pożar

Biomasa nadziemna Scenariusz 3 – zrąb zupełny

Martwa materia organiczna

Scenariusz 0 – brak zaburzeń

Martwa materia organiczna

Scenariusz 1 – gradacja owadzia

Martwa materia organiczna

Scenariusz 2 – pożar

Martwa materia organiczna Scenariusz 3 – zrąb zupełny

Trzy podobne drzewostany

Trzy różne metody

Trzy różne wyniki

Dziękuję za uwagę
